

ELEMENT

VERSATILITY

DESCRIPTION

The **ELEMENT** is a prime example of versatility. Its design makes it attractive for training, demonstration jumps or as a canopy for those who do not necessarily want to venture into higher performance areas. Available in 180, 200, 220, 240, 260, 280 and 300 square foot sizes, it is the legitimate successor to our **BALANCE**, which has become a classic since its introduction in 1996 and is highly regarded far beyond the borders of this country.

Naturally, the **ELEMENT** carries on the outstanding genetics of the **BALANCE**. It is virtually stall free, has very good flaring dynamics and has no tendency to overshoot from a low brake position, helping to avoid unwanted landing accidents.

* These fabrics have been jointly developed with **PARATEC** and are only available from **PARATEC** in this combination. The fabrics are strong and durable, making the **ELEMENT** a valuable investment.

The basic shape is that of a double trapezoid, with most of the leading edge being straight and only the trailing edge having a slight to moderate sweep. This ensures a directional stable opening with a light toggle pressure, as well as fun and controllability within the student's ability.

The wide range of sizes available makes it easy for anyone to choose a wing load that suits their individual ability, experience and intended use.

The **ELEMENT** is a modern hybrid construction with a ZP PN4* upper sail and a F-111 PN1* lower sail and spars.

ELEMENT

VERSATILITY

TECHNICAL DATA

Size	Suspended weight ¹	Max. deployment speed ²	Pack volume
180	61 kg - 118 kg	150 KTAS	440 cui
200	68 kg - 132 kg		470 cui
220	75 kg - 145 kg		510 cui
240	82 kg - 158 kg		535 cui
260	87 kg - 171 kg		570 cui
280	95 kg - 185 kg		605 cui
300	102 kg - 197 kg		640 cui

¹Skydiver including personal equipment and parachute system

²Max. speed when opening main container
